Discourse analysis considers how language, power and ideology are negotiated in various communities. Analyzing Everyday Texts provides a comprehensive and well-illustrated framework for the analysis of everyday texts by outlining and integrating three different perspectives: discoursal, rhetorical, and social. First, the tools of each perspective are carefully explicated in chapters on the resources of various communities. These three perspectives are then brought together in extensive analyses of systems in various communities. approaches to text and discourse analysis. The fully annotated lists of sources provide readers with an additional means of evaluation of the competing analytical methods. Interdisciplinary and international in its aims, Methods of Text and Discourse Analysis suggests the benefits both linguists and sociologists will derive from a more intimate knowledge of each others' methods and procedures.

Understanding the discourse of text messaging has profound implications for society. SMS text messaging has impacted considerably on how we communicate with others. Negative, sometimes alarmist media coverage continues to fuel debate surrounding its 'damaging' effects on language and literacy, yet these portrayals tend to be based on extreme or fictionalised accounts of text messaging. What kind of language do people really use when they text? Drawing on a range of academic sources from various fields, this book describes the language used in a corpus of over 11,000 text messages, as yet the largest collection in the UK. In particular, the book shows how the discourse of text messaging is shaped by users' often creative responses to the functions and constraints of the medium. This is an essential book for upper level undergraduates and postgraduates studying discourse analysis, as well as educators wanting to understand this important new form of discourse.

An introduction to discourse analysis for linguistic field workers which is practical, addressing issues commonly confronted by field linguists. The overarching theme of Discourse and Technology is cutting-edge in the field of linguistics: multimodal discourse. This volume opens up a discussion among discourse analysts and others in linguistics and related fields about the two-fold impact of new communication technologies: The impact on how discourse data is collected, transcribed, and analyzed and the impact that these technologies are having on social interaction and discourse. As inexpensive tape recorders allowed the field to move beyond text, written or printed language, to capture talk discourse as spoken language the information explosion (including cell phones, video recorders, Internet chat rooms, online journals, and the like) has moved those in the field to recognize that all discourse is, in various ways, "multimodal," constructed through speech and gesture, as well as through typography, layout, and the materials employed in the making of texts. The contributors have responded to the expanding scope of discourse analysis by asking five key questions: Why should we study discourse and technology and multimodal discourse analysis? What is the role of the World Wide Web in discourse analysis? How does one analyze multimodal discourse in studies of social actions and interactions? How does one analyze multimodal discourse in educational social interactions? and, How does one use multimodal discourse analyses in the workplace? The vitality of these explorations opens windows onto even newer horizons of discourse and discourse analysis.
